Bunzz Hackathon Project

This a web3 decentralized protocol that collects funds to provide learning materials for schools in Africa.

Africa is a continent that is rich in culture and resources, yet afflicted by poverty and conflict but it is also a country of hope.

This project plans on eradicating poverty in Africa by wiping out illiteracy. Our goal is to raise funds that will be used to upgrade school buildings and provide students with up-to-date textbooks.

Through our project, we hope to bring educational opportunities and improved lives for thousands of African students.

"Education is the great engine of [personal development](). It is through education that the daughter of a peasant can become a doctor, that the son of a mine worker can become the head of the mine, that a child of farm workers can become the president of a great nation. It is what we make out of what we have, not what we are given, that separates one person from another."
NELSON MANDELA

Education is the key to unlocking a brighter future for those in Nigeria. Sadly, many students can't get proper education due to lack of resources that will provide a better learning experience for them in schools. This is where crowdfunding comes in. We want to launch a crowdfunding project that will help African students be able to get the quality education they deserve and give them the opportunity to change their lives.

Our Mission

They are lots of crowdfunding projects in Africa but this particular project stands out cause of its initiative to provide learning materials to primary and secondary schools in rural areas.

We are raising funds to provide quality learning materials to students who can't afford it to grant them a better learning experience.
